

Charles Guy Wire Markers

Long-Lasting, Highly Visible Identification for Down Guy Wires and Cable Installations

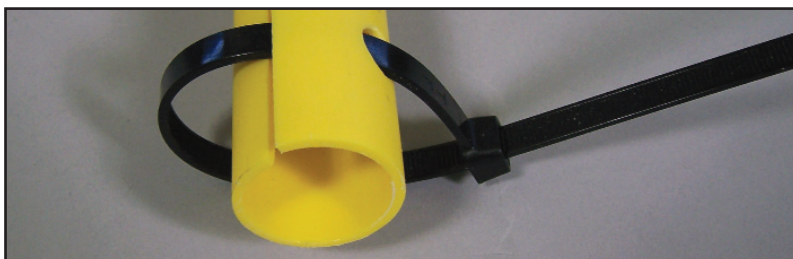

Charles Guy Wire Markers greatly improve safety by providing high visibility of down guy wires and other cable installations exposed to pedestrian and/or vehicular traffic. Constructed of HDPE imbued with UV stabilizers, they provide a long-lasting marker and a bright yellow or white appearance to identify guy wires down to their anchor attachments.

Easy to install and tough to remove, Charles Guy Wire Markers are full round markers with a 1.25" outside diameter and 8' or 10' standard lengths. A generous wall thickness of .075" provides excellent cold-weather properties and helps resist cracking and shattering. Markers are pre-split with a notched end allowing technicians to quickly install them over existing guy wires.

Cable Tie Attachment

A 14.5" cable tie attachment is included to deter vandalism by making it tough to separate the marker from the wire. The attachment is shipped threaded into two pre-drilled holes, eliminating lost parts at the job site and providing a secure attachment point to the marker. The photograph below demonstrates proper cable tie attachment to the guy wire.

Specifications

Material:	HDPE with UV Stabilizers
Outside Diameter:	1.25"
Wall Thickness:	.075"
Length(s):	96" (8 ft.) or 120" (10 ft.)
Color(s):	OSHA Safety Yellow or White
Attachment:	14.5" Nylon Cable Tie

Ordering Information

Part #	Description
12-08GWMYC	Charles Guy Wire Marker, 8' Length, Yellow Color, with Cable Tie Attachment
12-10GWMYC	Charles Guy Wire Marker, 10' Length, Yellow Color, with Cable Tie Attachment
12-08GWMWC	Charles Guy Wire Marker, 8' Length, White Color, with Cable Tie Attachment
12-10GWMWC	Charles Guy Wire Marker, 10' Length, White Color, with Cable Tie Attachment

Please call for availability of custom lengths, pre-placed reflective marking tape, and other options.
